Overview

Flex users management for Confluence add-on excludes users, who have not been logged in for a long time, from the license group (In active) and automatically gives them access if necessary.

Main functions:

- Periodically exclusion users from license groups based on the last login time
- Periodically maintenance the number of licensed users
- Effective response to temporary increase / decrease of users
- Function to enable / disable add-on
- Automation of user activation and inactivation
- Pre-test function of 'auto login function'
- Ability to immediately adjust the number of users
